KALARI "B" DOUBLE BULK TANKER

## KALARI USES THE YORK ADVANTAGE

With the pressures placed on transport companies today of competitive rates, high fuel prices and maintenance costs to name a few, any savings on operating costs needs to be investigated. Utilising the same axle and suspension package to cover a range of applications has huge benefits to a transport company's workshop such as parts inventory, staff familiarisation and operation knowledge. The York axles fitted with Conmet pre-set aluminium hubs extend bearing and seal life as well as being beneficial to brake wear through heat reduction. The York Tecair 2 air suspension has the capacity and stability to handle a variety of applications and uses quality components from Goodyear, Wabco and Boge. **YORK**

*Kalari Transport, since its foundation, has been a high profile operation because of its innovative equipment. Purpose designed and built equipment has seen Kalari give its customers an advantage and as a result secured long term business. "Once gained it was important to retain the competitive advantage and keeping the parts inventory in our workshop at the lowest possible level would be a big help," says **Doug Drummond, Fleet Manager.** "To do this we chose York axles with York Tecair 2 air suspension to handle the diverse range of applications including tippers, bulk pneumatic tankers, 4 axle dogs and curtain sided trailers."*
