With a long journey of almost 30 years in logistics and transport industry, KM Trans Logistics (P) Ltd. (formerly known as Kundanmal Mukanmal Traders (P) Ltd.) is leading the market with its timely and damage-free delivery. We came into existence in the year 1988 and started our journey as a family owned business. Since then we have seen immense growth and improvement in our operations and have been successful in satisfying our clients.

We take pride while sharing our success in achieving the top position among the leaders of the industry. We have been recognized as one of the top three car transporters in India. We are an IBA approved and ISO 9001:2000 certified transporter and are blessed to be associated with renowned brands. We started with bulk LPG transportation and are now backed with a **fleet of more than 1500 vehicles**, 600 finished car trailers, 440 chassis carriers, 300 flat-bed trailers and 200 LPG tankers. We are a leading logistics solution provider and are serving 90% of India's auto manufacturers. Our corporate office is in Jaipur, Rajasthan while we have 30 branch offices, 25 loading stations, 60 fuel and support stations with over 4 administrative clusters across the nation.

York axles were introduced in 2012 in our fleet with the introduction of chassis carriers. After that, York has made its mark in our company as one of the best equipment for trailer undercarriage and we quickly switched to York axles in different segments also, owing to the brilliant performance that York offers. They have kept on improving their axles which has helped us **extend the service intervals** dramatically from 20,000kms to 50,000kms which was then further increased to 100,000kms and now stands at **300,000kms** with the introduction of YPS technology. This has helped in improving the reliability and efficiency of our trailers without compromising on durability. It has also helped bring down the maintenance costs, because of the supreme life offered by the high quality parts used. Additionally, we have seen an average **improvement of 8-10% in tyre life** because of less rolling resistance and better stability of the wheel alignment, contributing to a big cost saving.

The service and support provided by York is also exemplary. In case of any technical issue or need of assistance, a York technician is just a phone call away regardless of the location. Overall, we are highly satisfied with York and recommend it over others.
